

Conference “The dimension of renewable energies in Urban Planning”

Lisbon, 17 of March 2010

Local: Auditório do Alto dos Moinhos

OBJECTIVE:

The dimension of renewable energies in Urban Planning Conference intends to be a demonstration set of good practices on renewable energies integration in the urban environment according to the urban framework opportunities, needs and possibilities.

European Municipalities Politicians are called to present cases of success of renewable energy technologies integration in their cities, within the line of development and targets foreseen for their cities regarding energy efficiency and renewable energy.

A special focus will be given to solar thermal obligations outlining the importance of mainstreaming good practices when accessing other countries, regions and cities, based on the European partners' experiences that allow defining a consensual framework for solar thermal development.
