# SAVE ENERGY NEWSLETTER № 3

The SAVE ENERGY Project aims to transform the energy consumption behavior of public building users – focusing on public servants and citizens – by applying existing ICT-based solutions, specifically real-time information from building management systems and serious games, in an innovative user-driven perspective.

**Project partners:**

## Main achievements of SAVE ENERGY project

This article collects the main achievements of the project. The project has verified that it is possible to save energy through a user behaviour change. The savings shown are in the range of 7-74 % in some of the cases.
